Description of Work: _____

Location: _____

Anticipated Start Date: _____ Anticipated Completion Date: _____

Impervious Surface – A surface that has been compacted or covered with material to the extent that it is highly resistant to infiltration by water, including, but not limited to, roofs, sidewalks, patios, decks, sheds, driveways, tennis courts, and swimming pools.

Area of Lot (square feet): _____ Area of proposed new impervious coverage (square feet): _____

1. **Exemption:** No more than 10 percent of the lot area or up to a maximum 2,000 square feet shall be impervious cover.

Any regulated activity that meets the above exemption criteria shall not be required to submit a drainage plan implementing the stormwater quantity and quality controls of this chapter, provided that the applicant can demonstrate no downstream harm. This criterion shall apply to the total development even if the development is to take place in phases. The date of the municipal ordinance adoption shall be the starting point from which to consider tracts as "parent tracts" in which future subdivisions and respective impervious area computations shall be cumulatively considered. Exemption shall not relieve the applicant from implementing such measures as are necessary to protect health, safety, and property.

2. For new impervious coverage greater than 10 % of the lot area or 2,000 square feet, a drainage plan shall be prepared as outlined by Township Code Chapter 116 and submitted for review. A review/inspection fee plus all additional engineering fees will be charged to the applicant.
